Using the commands

The RM523 has three communication ports which all accept the same commands:

RS232 port
RS485 ports
TCP/IP

The RS232/RS485 ports must be configured with 19200 baud, 8 data bits, 1 stop bit, no parity

The TCP/IP port accepts commands at port 5001. The RM523 accepts maximum 3 simultaneous TCP/IP connections.

Command overview

Example: Set volume R001 zone 1 to -30dB

ASCII #IR001IF001ISV01I30I58ablreturn

Important

- The address of the RM523 is fixed at R001.
- The checksum is CRC-16 excluding the '#'. You can replace the checksum with 'U', this is always accepted as checksum.
- return = 0x0d 0x0a

Command flow

- 1) The client sends a command to the RM523
- 2) The RM523 acknowledges the command by returning the same command and a '+' as Argument.
- 3) The RM523 updates all client's with the new information

All volume, routing and tone settings will be lost if the device is switched off. To keep the changes you must save them with the "SAVE" command. All device settings that are configured through the configuration page of the website are saved with every change automatically.
